Senior Product and Technical Support Engineer | API Integrations | Webhooks | SaaS Systems (Shopify / WordPress)

Professional Experience

Senior Product Support Engineer

LimeSpot (Shopify Ecosystem) | Remote, Canada | Feb 2025 – Feb 2026

- Diagnosed and resolved API integration failures (**authentication errors**, malformed requests, **4xx/5xx responses**), restoring system communication and reducing recurring incidents across multiple production integrations
 - Resolved **webhook** delivery failures (timeouts, payload mismatches, endpoint errors), ensuring reliable event processing across distributed systems
 - Traced system-level issues across logs and **API** responses to isolate root causes and prevent repeat failures
 - Performed **SQL-based data validation** to identify inconsistencies in customer data and recommendation logic, improving system accuracy
 - Investigated **frontend** and backend integration issues impacting **Shopify** storefront performance and personalization workflows
 - Improved support efficiency by optimizing AI-assisted triage workflows and response accuracy
 - Identified recurring integration failure patterns and contributed to long-term fixes, improving overall system reliability
-

Customer & Technical Support Engineer

Automattic (WordPress.com) | Remote, USA | [Mar 2023 – Feb 2025](#)

- Resolved **6,000+** technical support cases across **WordPress.com**, **DNS**, **billing systems**, and third-party integrations, maintaining high customer satisfaction
- Maintained **4+ tickets/hour** while handling complex technical and account-level issues across multiple systems and integrations
- Diagnosed and resolved **domain connection failures**, **DNS misconfigurations**, and API-based integration issues (Zapier, WPForms)
- Escalated and collaborated with engineering teams on high-impact issues, contributing to faster resolution of critical incidents
- Translated complex technical issues into clear guidance for non-technical users, reducing repeat support requests
- Diagnosed and resolved server-side performance bottlenecks by analyzing **PHP-FPM** execution layers and **Nginx** web server logs, reducing site downtime for high-traffic environments.

Technical Support Engineer | WordPress Developer

Webnus (Modern Events Calendar) | Remote, Canada | Mar 2019 – Aug 2022

- Resolved 5,000+ WordPress support cases involving plugin conflicts, theme compatibility, and third-party integrations
- Diagnosed frontend issues using HTML, CSS, and JavaScript to restore functionality and user experience
- Supported API-based integrations (including Zapier), ensuring reliable data flow between systems
- Guided customers through product setup, customization, and integration workflows, reducing onboarding friction
- Documented recurring issues and contributed to internal knowledge base improvements to reduce support volume

WordPress Developer (Freelance) MAAT | Remote, Georgia | Jan 2016 – Mar 2019

- Built and maintained 15+ WordPress websites, implementing custom features and integrations to support business requirements
- Customized themes using PHP and Advanced Custom Fields (ACF).
- Implemented integrations, feature updates, and maintenance workflows.
- Supported WooCommerce configurations and client troubleshooting needs.
- Configured and maintained local and production **Linux environments**, optimizing **MariaDB/MySQL database** performance and tweaking **Nginx** configurations for seamless plugin integration.

Core Competencies

- API Integrations (**REST** APIs, OAuth)
- Webhooks & Event-Driven Systems
- Technical Troubleshooting & Root Cause Analysis
- Log Analysis (JSON, request tracing)
- **Postman**, **SQL** (basic queries)
- **WordPress**, **Shopify**, WooCommerce
- DNS & Domain Configuration
- HTML, CSS, JavaScript, PHP
- **LEMP Stack Infrastructure** (Linux, Nginx, MySQL, PHP-FPM)
- **System Request Flow & Backend Debugging**

Proof Project – API Failure Case Study

- Built and configured a local **LEMP** stack server from scratch utilizing **Linux**, **Nginx**, **MariaDB**, and **PHP-FPM**.
- Mapped and analyzed the end-to-end request flow to isolate performance bottlenecks between the **Nginx** web server layer and the **PHP-FPM** execution layer.
- Successfully simulated and resolved a critical database connection failure by debugging MariaDB access privileges and PHP error logs, restoring full application functionality.
